SeaKlear Natural Clarifier

- [Technical Information](#)
- [MSDS](#)
- [Product Demo Video](#)

SeaKlear Natural Clarifier works better and does more than other clarifiers. SeaKlear Natural Clarifier has been proven reliable at safely keeping pools clear, easily and effectively. Use weekly to give you more time to enjoy your pool.

- Naturally clarifies cloudy water
- Safe to use with all sanitizers
- Removes excess oils and lotions to prevent scum at the water line
- Makes filters quicker and easier to clean
- Natural—no thickeners added; will not harm plants, animals or fish and is safe for your family and our environment
- Proven effective and reliable
- Easy and simple to use

Available Sizes:

Quart
Gallon

SeaKlear Natural Clarifier

Uses and Benefits of SeaKlear[®] Natural Clarifier

Clarifies Cloudy Water

SeaKlear Natural Clarifier got its name because it was originally used by the U.S. Navy to clear seawater for underwater photography. Environmentally safe, nontoxic and biodegradable, SeaKlear Natural Clarifier contains a natural ingredient, chitosan, which attracts the organic debris that causes cloudiness in pool, spa and hot tub water. A floc or mass of organic material is formed and carried to the filter, where it is more easily removed.

Easy-to-use, SeaKlear Natural Clarifier is an excellent clarifier. Each week, treat your water with SeaKlear Natural Clarifier specially formulated for pools or spas/hot tubs to improve water quality and clarity. With SeaKlear Natural Clarifier for Spas, use 1 ounce per 500 gallons of water, and with SeaKlear Natural Clarifier for Pools, use 1 ounce per 5,000 gallons of water.

Removes Excess Oil

Unlike synthetic, petroleum-based clarifiers, SeaKlear Natural Clarifier actually removes oils from the water. This unique, patented technology works with any pool, spa or hot tub system. Oils can be introduced when sunscreens, lotions and cosmetics are left behind in the water. SeaKlear Natural Clarifier works to encapsulate the oil molecules and holds them in suspension so the oil doesn't stick to pool and spa surfaces or filters. When filters are cleaned, the oil is removed in the effluent. The filter stays cleaner and lasts longer.

Removes Stain-Causing Metals

The unique molecular shape and electrical charge of SeaKlear Natural Clarifier allow it to entrap and aggregate heavy metal particles, including manganese, copper and iron, which have come out of solution. SeaKlear Natural Clarifier does not interfere with metal ions from ionizers and mineral-based purifiers. In fact, SeaKlear Natural Clarifier enhances these systems by removing the non-essential, stain-causing metals. One gallon of SeaKlear Natural Clarifier formulated for pools removes 1 part per million (ppm) of stain-causing metal in 20,000 gallons of water. Used on a regular basis at a rate of 4 ounces per 20,000 gallons, SeaKlear Natural Clarifier will help to keep metals in check.

Improves Filtration

Because the SeaKlear Natural Clarifier polymer is a "loose net molecule," it actually forms a subsurface over filters that helps remove organic debris and hold

SeaKlear Natural Clarifier FAQs

Is SeaKlear Natural Clarifier compatible with ozone?

SeaKlear Natural Clarifier is compatible with ozone.

Can SeaKlear Natural Clarifier be used with Baquacil[®] ?

SeaKlear Natural Clarifier is compatible with biguanide sanitizers.

Can SeaKlear Natural Clarifier be used with ionizers?

SeaKlear Natural Clarifier is compatible with all types of ionizers.

How does SeaKlear Natural Clarifier remove metals?

SeaKlear Natural Clarifier is able to remove metals at normal levels and keep them from accumulating. It only reacts with metals that have combined with organics and are likely to drop out of solution.

Will SeaKlear Natural Clarifier remove the metals from ionizers and metal purifiers?

SeaKlear Natural Clarifier does not interfere with the free metal ions that come from ionizers.

How long does SeaKlear Natural Clarifier last in the water?

SeaKlear Natural Clarifier is biodegradable and lasts five to seven days in the water.

How does SeaKlear Natural Clarifier compare with enzymes?

SeaKlear Natural Clarifier removes oil from

it above the filter media. Filters stay cleaner and work more efficiently.

A Natural Compatible Formula

SeaKlear Natural Clarifier is compatible with all sanitizing systems, including ozone, ionization and biguanide, and either bromine or chlorine systems. The main ingredient in SeaKlear Natural Clarifier is chitosan, a safe nontoxic fiber similar to cellulose that grabs suspended particles and removes them from the water.

SeaKlear Natural Clarifier is also available in tablets for use in pools and spas.

the water by flocculation, changing the structure of the oil to a nonsticky, micron-sized bead that is taken into the filter. These beads hang loosely around the filter media without sticking or absorbing. When the filter media is cleaned, the oil beads are pulled out in the effluent. Conversely, enzyme products work by digesting oils. In many cases, by-product waste from enzyme products can still be left behind in water. Enzyme products are more expensive to use and can cause foaming.

Is a scale preventative needed when using SeaKlear Natural Clarifier?

In most cases SeaKlear Natural Clarifier works well at preventing scale. In hard water areas an additional scale reducer is recommended.

What if SeaKlear Natural Clarifier doesn't clear the water?

Check your filter! The technology of SeaKlear Natural Clarifier is contingent upon good filtration. Make sure filters are clean. For sand filters make sure the media is not dirty, old or worn.

What is the shelf life of SeaKlear Natural Clarifier?

The shelf life of SeaKlear Natural Clarifier is five years.

How does SeaKlear Natural Clarifier improve filtration compared to other clarifiers?

Other clarifiers are synthetic and petroleum based. While they work well to clear the water, there is a side effect of combining oil with dirt. Scum formation on the filter surfaces causes the media to plug faster and elements to wear out faster. SeaKlear Natural Clarifier creates a "loose net molecule" over the media of the filter that picks up dirt and still allows water to flow through the device.
